Biden on track to hit Covid-19 vaccination target

President Joe Biden promised to administer 100 million vaccines in his first 100 days in office. Since Dec. 14, the U.S. has delivered about 75.2 million vaccines and administered 63.1 million. As states ramp up vaccination efforts, Covid-19 cases are on a steady decline since peaking in early January.

63.1 million vaccines have been administered in the U.S., as of Feb. 21

Small states set the pace for vaccine rollout

With shipment delays caused by winter weather and vaccination website crashes, some states have dealt with more setbacks than others. While Utah has administered more than 90 percent of the doses delivered by the federal government, just 11 percent of its population has been vaccinated — one of the lowest rates in the country. On the other hand, the District of Columbia has one of the lowest rates of delivered doses that have been administered — 72.3 percent — yet more than 15 percent of residents have received as least one dose of a Covid-19 vaccine.

Share of delivered doses that have been administered

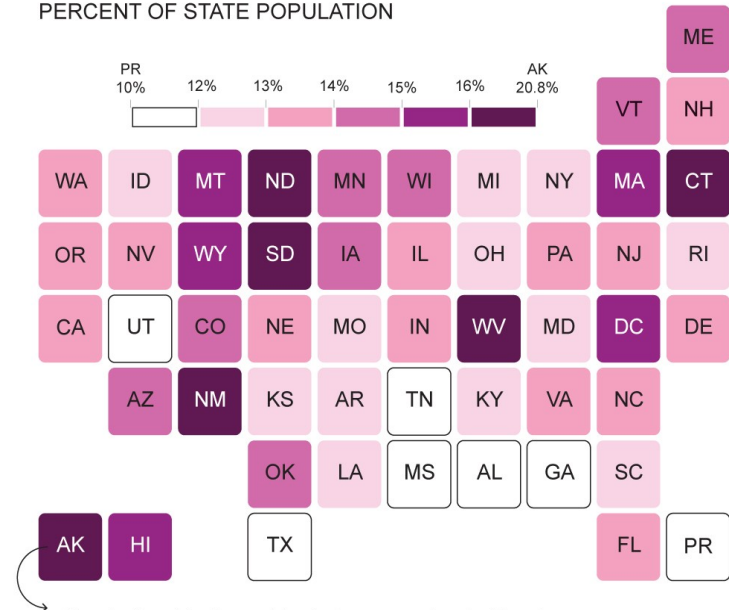

PERCENT OF VACCINE DOSES

About 60 percent of the vaccine doses delivered to Puerto Rico have been administered, a rate lower than that of any U.S. state.

Share of state population that has received at least one dose

PERCENT OF STATE POPULATION

One in five Alaska residents have received at least one dose so far — the highest rate of any state.
