Vaccine tracker: 25.3 percent of the U.S. has received first dose

As of March 23, CDC data shows one in four Americans have received at least one Covid-19 vaccine dose, and 13.7 percent of the total U.S. population has been fully vaccinated. Vaccination rates are higher for the 65 and older group; nearly 70 percent of older adults have received at least one dose, and 43.1 percent are fully vaccinated. President Joe Biden declared earlier this month that the U.S. will have enough vaccine for every adult by the end of May, moving up his previous timeline by two months.

Biden promised to administer 100 million Covid-19 vaccines in his first 100 days in office. His administration announced that as of March 19 he reached that goal weeks ahead of schedule. Some experts have criticized the Biden administration for not being ambitious enough, especially as more contagious virus variants circulate, since the country was conducting nearly 1 million vaccinations per day when Biden took office.

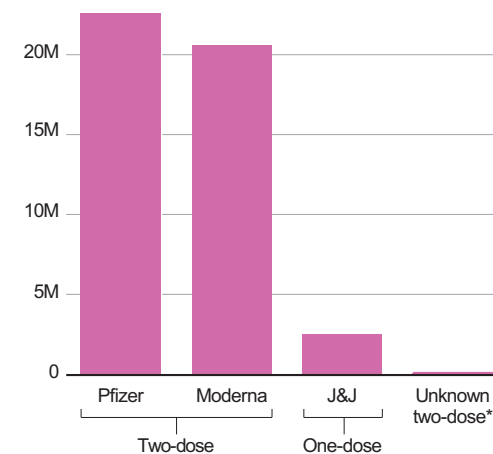

128.2M vaccine doses have been administered as of March 23

DOSES ADMINISTERED

45.5M, or 13.7 percent of, Americans are fully vaccinated

NUMBER OF PEOPLE

*The vaccine manufacturer was not reported for about 30,000 vaccine recipients, according to the CDC.
